

rubric for assignment
one, CIS 234

an A project

does the following three things:

1. creates a market of 6,000 unique stocks, named randomly with 4 characters: prices, symbols, IPO Qty
2. symbol lookup, take a stock name from the user and locate that stock

- 3: purchase mechanism, state the name of a stock to buy
 1. your app locates the stock, like in (2)
 2. gets the price, symbol
 3. make a new transaction with data from last step,
 4. add the transaction to your portfolio
 5. print the portfolio
